DREAM ESTATE

REAL ESTATE WEBSITE PROJECT REPORT

Property Search and Listing Website

A responsive real estate website developed using HTML, CSS and JavaScript.

Project Name	Dream Estate
Technologies	HTML5, CSS3 and JavaScript
Project Type	Front-end website
Main Purpose	Browse and filter property listings

1. Introduction

Dream Estate is a sample real estate website that helps visitors browse houses, apartments, and villas. It displays featured property listings with photographs, locations, bedroom and bathroom details, and prices. Visitors can search by city, property type, and budget. The website also contains About and Contact sections.

2. Project Objectives

• Create a simple and attractive real estate website.

• Display six sample property listings with images and details.

• Allow users to filter properties by city, property type, and budget.

• Provide navigation links to Home, Properties, About, and Contact.

• Add Contact Owner buttons for each property.

• Use responsive CSS so the property cards adjust to smaller screens.

3. Technologies Used

HTML5: Builds the page structure, navigation, search controls, property cards, About section, Contact section, and footer.

CSS3: Defines colours, spacing, gradients, buttons, card layouts, shadows, hover effects, and responsive media queries.

JavaScript: Filters property cards using the selected city, property type, and budget. It also displays an alert when a Contact Owner button is clicked.

4. Website Sections

Header and Navigation

Displays the Dream Estate name and navigation links to Home, Properties, About, and Contact.

Hero Banner

Displays the heading “Find Your Dream Property”, a short message, and an Explore Homes button that moves to the property listings.

Property Search

Contains a city text field, property-type dropdown, budget dropdown, and Search button.

Featured Properties

Shows six properties: Beautiful Family House, Modern Apartment, Luxury Villa, Cozy Apartment, Independent Home, and Budget Home. Each card includes a photo, location, room details, price, and Contact Owner button.

About Dream Estate

Explains that the website helps people discover houses, apartments, and villas and aims to make property searching easy.

Contact Us

Displays a sample email address, phone number, and Vijayawada address.

Footer

Shows the 2026 copyright notice and the message “Your dream home starts here!”

5. Property Listings in the Website

Property	Location	Type	Price
Beautiful Family House	Vijayawada	House	■45,00,000
Modern Apartment	Hyderabad	Apartment	■65,00,000
Luxury Villa	Guntur	Villa	■95,00,000
Cozy Apartment	Vijayawada	Apartment	■35,00,000
Independent Home	Hyderabad	House	■48,00,000
Budget Home	Guntur	House	■28,00,000

6. Important Code Concepts

Flexbox

The header and search bar use Flexbox to arrange items in a row and allow wrapping.

CSS Grid

The .properties class displays property cards in three columns on large screens.

Hover transition

Property cards move slightly upward when the pointer is placed over them.

Responsive design

At widths below 800px, cards display in two columns; below 550px, they display in one column.

Data attributes

Each property card stores its city, type, and numeric price in data-city, data-kind, and data-price attributes.

DOM selection

JavaScript uses getElementById() and querySelectorAll() to access page elements.

Filtering

searchHomes() checks whether the city, type, and price match the visitor's selections, then shows or hides each card.

Owner alert

contactOwner(name) displays an alert identifying the selected property.

7. How the Search Works

• The visitor enters a city or leaves the city field empty.

• The visitor selects a property type or chooses All Property Types.

• The visitor selects a budget or chooses Any Budget.

• When Search is clicked, JavaScript reads the selected values.

• The code checks each card against the city, type, and price conditions.

• Matching cards remain visible; non-matching cards are hidden.

• The result message displays the number of matching properties.

8. Website Output Screenshot

The screenshot supplied with the project shows the Dream Estate page, including the navigation bar, blue welcome banner, property search controls, six featured property cards, About section, Contact details, and footer.

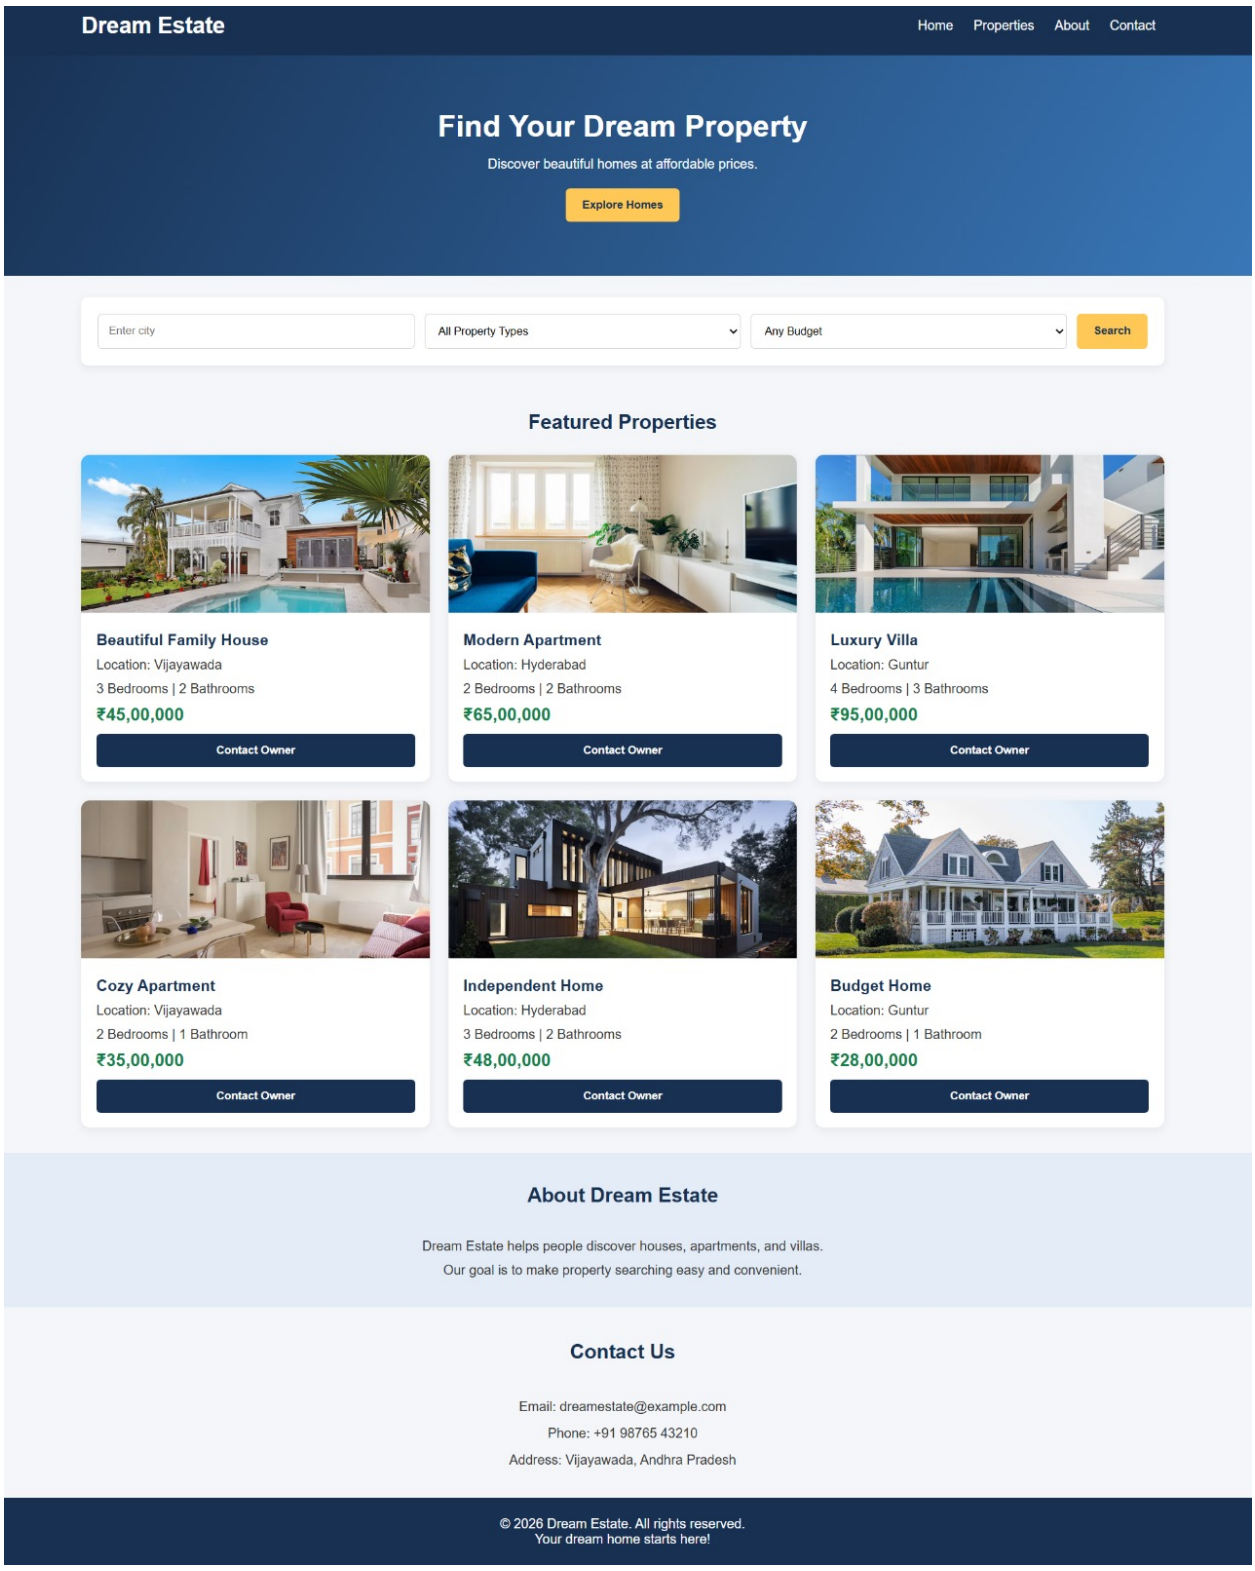

Figure 1. Dream Estate website output supplied by the user.

9. Limitations and Possible Improvements

• The listed properties, prices, locations, and contact details are sample information and should be verified before real-world use.

• The Contact Owner buttons show an alert only. They do not call an owner or send a message.

• The search works only on the six property cards already present on the page.

• The website does not use a database, user login, or property submission form.

• A future version could connect to a database, add property details pages, and provide a real enquiry form.

10. Conclusion

The Dream Estate project demonstrates a basic real estate listing website using HTML, CSS, and JavaScript. It provides a clear layout for property listings and an interactive search feature based on city, property type, and budget. The responsive design adjusts the cards for tablet and mobile screens. This project gives practice with page structure, CSS layouts, DOM selection, data attributes, conditional filtering, and click events.

11. Quick Viva Questions and Answers

What is the purpose of Dream Estate?

It helps visitors view and filter sample property listings.

Which technologies are used?

HTML, CSS, and JavaScript.

How many property cards are displayed?

Six property cards.

What search filters are available?

City, property type, and budget.

What is CSS Grid used for?

It arranges the property cards in columns.

What is a media query?

It applies CSS styles according to screen size.

What does searchHomes() do?

It checks the filters and shows matching properties.

What does contactOwner() do?

It shows an alert for the selected property.

Does the website connect to a property database?

No. It uses sample property cards written in the HTML.

Appendix A. Complete HTML, CSS and JavaScript Source Code

The complete source code supplied for the Dream Estate website is reproduced below.
