NRI UNIVERSITY

WEB DEVELOPMENT PROJECT REPORT

College Information and Admissions Website

A responsive college website built using HTML5, CSS3 and JavaScript

Project	NRI UNIVERSITY Website
Technology	HTML5, CSS3 and JavaScript
Project Type	Front-end / Static Website
Purpose	Educational web development project

Prepared as a simple-English guide to the project, its design, code, and visible browser output.

1. Introduction

NRI UNIVERSITY is a sample college information and admissions website. It presents information about the college, courses, campus facilities, admissions, faculty, and contact details. The website is designed to be simple, clear, and easy to browse. HTML creates the page structure, CSS controls the appearance and responsive layout, and JavaScript displays a confirmation message when the contact form is submitted.

2. Project Objectives

• Create a clear homepage for NRI UNIVERSITY.

• Display information about the college and its courses.

• Show campus facilities and faculty details.

• Highlight admission information and provide an enquiry link.

• Provide contact details and a simple contact form.

• Practise HTML structure, CSS styling, responsive design, and basic JavaScript.

3. Technologies Used

HTML5: Creates the website structure, including the header, navigation, hero section, course cards, facilities, faculty, contact form, and footer.

CSS3: Adds colours, fonts, spacing, gradients, cards, shadows, hover effects, grid layouts, and responsive media queries.

JavaScript: Handles the contact form submission event, shows an alert message, and clears the form fields.

4. Website Sections

Header and Navigation

The dark-blue header displays the NRI UNIVERSITY name and links to Home, About, Courses, Facilities, Admissions, and Contact. The links move visitors to the matching page sections.

Hero Section

The opening banner displays “Welcome to NRI UNIVERSITY”, the tagline “Learn Today, Lead Tomorrow”, a short description, and an Explore Courses button.

About Our College

This section gives a short introduction about the college, its learning environment, faculty, laboratories, and student development.

Our Courses

Six course cards show Computer Science, AI & Machine Learning, Mechanical Engineering, Civil Engineering, Electrical Engineering, and Electronics Engineering.

Campus Facilities

Six facility blocks describe the library, laboratories, sports, transportation, hostel, and Wi-Fi campus.

Admissions

A coloured banner announces that admissions are open and provides an Enquire Now link to the contact section.

Our Faculty

Three cards introduce the Computer Science, AI, and Engineering departments.

Contact Us and Footer

The contact section displays sample address, email, phone details, and a form for name, email, and message. The footer shows copyright text and the college tagline.

5. Important Code Concepts

CSS reset and box sizing

The universal selector removes default margins and padding and makes element sizing easier to manage.

Flexbox

The header uses display: flex to place the logo and navigation links in a row and allow wrapping when needed.

CSS Grid

The course cards and facilities use CSS Grid to arrange items in three columns on wider screens.

Hover effects

The nav links and cards change appearance when the pointer moves over them.

Gradients

Linear gradients create the blue hero banner and admission section.

Media queries

The @media rules change the card columns and header layout on smaller screens.

Anchor links

Links such as href="#courses" take the visitor to the section with the matching ID.

JavaScript form handling

The sendMessage() function prevents the default form action, displays a thank-you alert, and resets the form.

6. Website Output Screenshot

The screenshot below shows the website as supplied. It includes the navigation bar, welcome banner, college introduction, course cards, campus facilities, admissions banner, faculty cards, contact form, and footer.

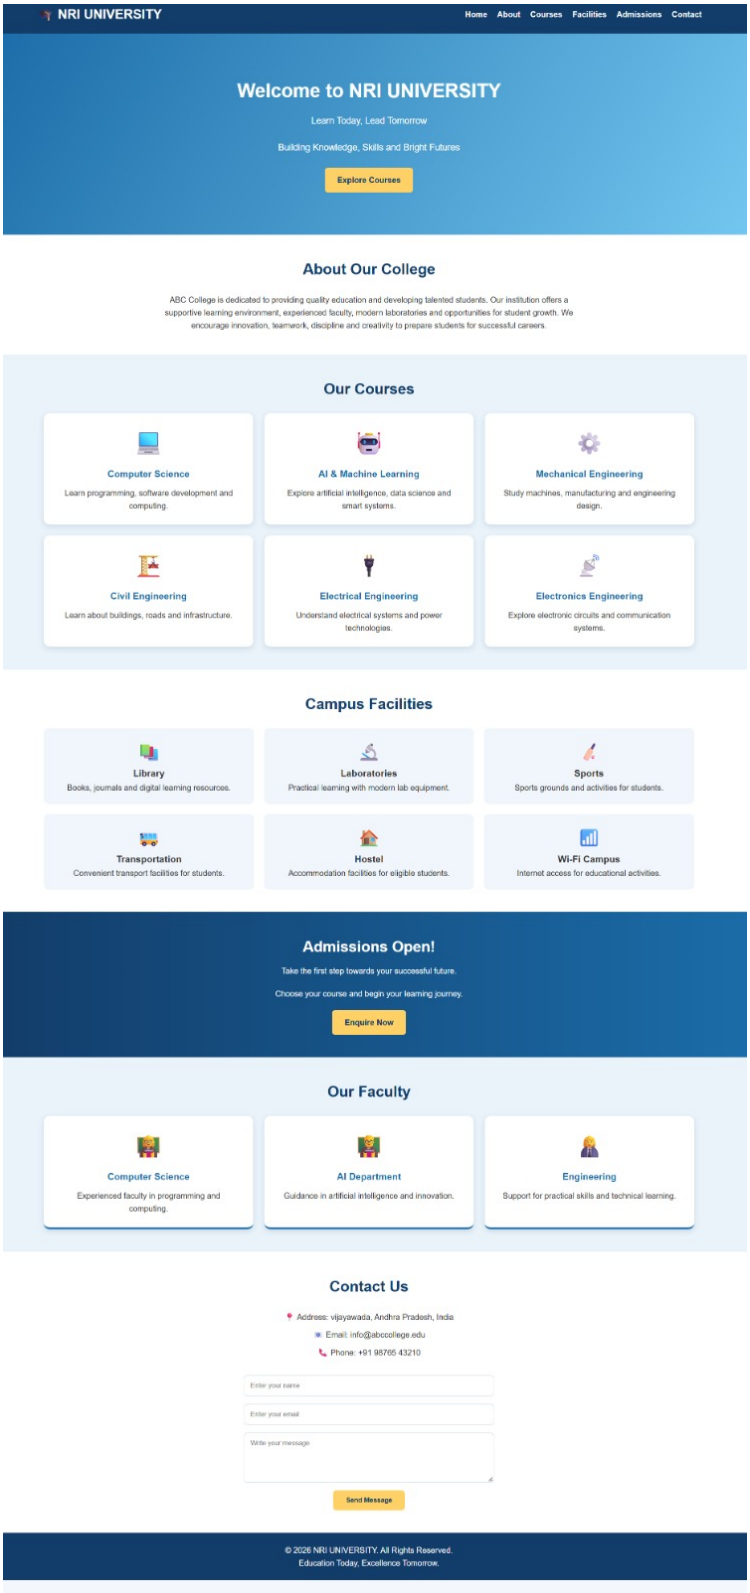

Figure 1. NRI UNIVERSITY website browser output (user-supplied screenshot).

7. How the Website Works

• The browser reads the HTML and builds the page structure.

• The CSS styles the header, banner, sections, cards, form, and footer.

• The navigation links use section IDs to move to the relevant parts of the page.

• CSS Grid displays the course, facility, and faculty cards in columns.

• Media queries change the layout for tablet and mobile screen widths.

• When the contact form is submitted, JavaScript displays a thank-you alert and resets the form.

8. Observations and Improvements

• The About section heading says “About Our College”, while its paragraph begins with “ABC College”. Replace this sample name with the correct institution name if required.

• The email, address, and phone number are sample contact details. Verify and replace them before public use.

• The contact form only displays a browser alert. It does not send the message to an email address or save it in a database.

• The faculty section is present in the page, but it is not included as a separate link in the navigation bar.

• A future version could connect the form to a backend, add real faculty profiles, and include verified admission details.

9. Conclusion

The NRI UNIVERSITY website demonstrates how HTML5, CSS3, and basic JavaScript can be combined to create a responsive college information website. It contains college information, courses, campus facilities, admissions, faculty, and contact details. The project provides practice with semantic page sections, navigation links, Flexbox, Grid, gradients, hover effects, media queries, and form event handling. The contact form is a front-end demonstration and would need a backend service to deliver or store messages.

10. Quick Viva Questions

What is the purpose of this project?

To display college information, courses, facilities, admissions, faculty, and contact details.

Which technologies are used?

HTML5, CSS3, and JavaScript.

What is HTML used for?

HTML creates the structure and content of the website.

What is CSS Grid used for?

It arranges cards and facilities into columns.

What is a media query?

A CSS rule that applies styles at specified screen widths.

What does the Enquire Now button do?

It moves the visitor to the contact section.

What does the JavaScript function do?

It shows a confirmation alert and resets the contact form.

Does the form send an email?

No. It only displays an alert in this version.

Appendix A. Complete HTML, CSS and JavaScript Source Code

The following is the complete source code supplied for the NRI UNIVERSITY website. It is included in the report for reference and editing.

```
<!DOCTYPE html>
